4 Internet Safety Tips

Watch out for phishing! 🎣

Phishing is a common approach for tricking users into giving up private information or downloading viruses. Be careful when clicking links.

Use strong passwords! 💪

Combine 3 random words with numbers or symbols that are not easily guessed or related to one another. Use different passwords for different accounts.
Keep your devices safe! 🔒

Always keep your device software up to date in order to have the best protection. Turn on automatic updates. Do not leave your devices unattended and unlocked.

Pro Tip: Enable MFA! 📲

Multi-Factor Authentication is an extra security measure to prevent unauthorized access to your accounts. Check the settings in your account and enable MFA.
