

## Checklist: Accessibility

The bullet points are explained on the following page:

[Accessibility – checklist for your content in Canvas](#)

### The checklist

I have

- chosen "pages" when possible instead of PDFs
- made an automatic accessibility check (for both pages and PDFs)
- written the texts based on principles of plain language
- created headings with the built-in templates
- put the headings in the correct order
- made link texts clear, even without surrounding text
- given all images an alt text
- captioned videos
- if necessary, supplemented the media with a text version
- tested it on a mobile phone.
