

# Energy-saving tips

Together we can make a big difference!

## Close doors and switch off the equipment

Close doors and switch off the equipment in rooms that are not in use. Switching off equipment when you leave for the day cuts its energy use by half.

## Sit with others

Sit with others when you're studying, especially in the evening. This creates a friendlier, safer and more stimulating environment.

## Do not open windows

Do not open windows, as it puts the ventilation system out of balance. If it's too hot, take off a layer of clothing. If it's too cold, work standing up for a while.

## Unplug your charger

Unplug your charger when it's not in use. If the charger is warm, it's still using energy.

## Remember to close the hoods

Do you work in a lab? Remember to close the hoods and don't use them for storage. An open hood consumes as much energy as a small house.
