

Andreas Feldmann is Associate Professor in Industrial Engineering and Management with specialization in Sustainable value chains for materials. He received his PhD in Operations Strategy, with a focus on international manufacturing networks. Since 2015, his research has focused on the transition towards sustainable and circular value chains for materials, with an emphasis on metals. Andreas is working extensively in multi-disciplinary teams, with competences in process technology and management are integrated. He is currently starting new projects related to other materials and products such as batteries, solar panels and wind power installations.
