

## This is KTH Royal Institute of Technology

## An innovative European technical university

Since its founding in 1827, KTH Royal Institute of Technology in Stockholm has grown to become one of Europe's leading technical and engineering universities, as well as a key centre of intellectual talent and innovation. We are Sweden's largest technical research and learning institution and home to students, researchers and faculty from around the world dedicated to advancing knowledge.

## Versatile solutions to global challenges

KTH is working with industry and society in the pursuit of sustainable solutions to some of humanity's greatest challenges: climate change, future energy supply, urbanisation and quality of life for the rapidly-growing elderly population. We are addressing these with world leading, high-impact research and education in natural sciences and all branches of engineering, as well as in architecture, industrial management, urban planning, history and philosophy. Two-thirds of the SEK 5 billion turnover relates to research.

Basic and applied research are performed side-by-side at KTH and interdisciplinary research is conducted in parallel with work in specific fields. This approach encourages versatile solutions and the innovative climate creates many opportunities to realise great ideas. Our educational programmes foster a new generation of engineers, architects, teachers and undergraduate engineers.

KTH embraces academia and the public and private sectors working together. We are part of extensive international research collaborations and participate in a large number of educational exchange or joint programmes with universities and colleges in Europe, the U.S., Australia, Asia and Africa.

## Working for a brighter, more sustainable tomorrow

Sweden is considered to be one of the most technologically innovative countries in the world and Stockholm is consistently ranked as one of world's most entrepreneurial, innovative and attractive cities. KTH maintains close relationships with an expanding network of international companies and the industrial community in a number of fields and working and studying here provides access to this network.

The five KTH campuses in Greater Stockholm, gather more than 13,500 full-time students, some 1,700 PhD students and approximately 3,800 full-time employees. The campuses are strategically located close to their areas of research and study, for example KTH Kista is situated in the middle of the Kista ICT hub, with some of the world's leading Information and Communications Technology companies. One of our other campuses, KTH Flemingsberg, is located in one of Northern Europe's leading medical technology centres for research and industrial activity.

KTH will continue to focus on research and education for a brighter, more sustainable tomorrow. We will continuously assess the impact of our efforts in society and contribute with the intellectual resources of our students and researchers to create new approaches to some of the most critical challenges of our times.
